### 2. Power On the System:

Ensure the hot water system is connected to electricity.

### 3. Enter WiFi Setup Mode:

Press & hold the **Mode Button** and the **UP Button** on the display screen at the same time for 3 to 5 seconds. This will initiate the WiFi connection process. Once in WiFi setup mode, the **WiFi icon**  on the display screen **will start flashing**, indicating that the system is ready to connect to your WiFi network.

#### 4. Complete WiFi Setup:

Use the corresponding mobile app to complete the WiFi setup process and connect to your desired network. Ensure your WiFi network is within range and the correct credentials are entered for a successful connection. You will be prompted to connect your phone to the WiFi network. The

WiFi icon  will stop flashing once WiFi is connected.

#### 5. Add the Device to the App:

You can add the hot water system to your app by pressing **“Add a Device”** in the app, or the app will automatically search for nearby hot water system unit. Once added successfully, a **green tick** will appear. You can rename your hot water system using the **pencil editing icon** .

**Note:** Please ensure your mobile phone & hot water system are connected to the same WiFi network during the setup process for seamless integration.
